### Cisco Access Point - Initial IP Configuration (WAP4410N ...

What worked for me was plugging the wap4410n that will act as a repeater into a router, changing the settings to allow wireless (http) browser access and then completing the rest of the setup wirelessly. Since a wap4410n has both a wired and wireless mac address, make sure you use the correct one when configuring the ap and repeater.

### Setting up WAP4410N as Wireless Repeater - Cisco Community

I need to configure a WAP4410N for use on a small, very simple business network. There should be a corporate WLAN and a guest WLAN. The corporate WLAN should allow anyone connectd to it to access resources on the domain. In front of the WAP is a cable modem/router and a basic Level 2 (web managed) switch.

### Configure WAP4410N with Multiple SSIDS - Cisco Community

The easiest way to ensure you are reaching the WAP4410N is to plug it directly into a PC that has a static IP address such as 192.168.1.200, Subnet Mask 255.255.255.0, no gateway or DNS. Hold the reset button on the WAP4410N for 15 seconds and you should be able to reach it at 192.168.1.245.
